ABSTRACTED-PUB-NO: KR2001097359A

BASIC-ABSTRACT:

NOVELTY - A health care system and a control method thereof are provided to enable a user to connect to a medical support server through the internet and to provide information on the user's health measured by a personal medical information measuring device, and by enabling the user to receive a medical treatment supported by medical consultants according to the health condition of

the user.

DETAILED DESCRIPTION - A personal medical information measuring device unit(1) is connected to a personal computer. The measuring device unit(1) measures medical information on a user and processes the information in the form suitable for transmitting/receiving measured data. A medical support server(7) judges whether the health condition of the user according to the data transmitted from the user computer in case that the user computer is connected through the internet. The medical support server(7) is connected to a financial institution server(11), an insurance company server(13), a medical equipment selling company server(15) and a logistics company server(17) and a drug store server(19). A customer computer(3) is connected to the personal medical information measuring device unit(1). In addition, the customer computer(3) receives a data signal of personal medical information. A database storage device.
